

Presentation Slide Deck

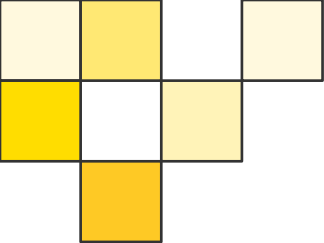

Getting Started with H2O.ai Managed Cloud

Six lessons · Beginner

Follow along with the video course at h2o.ai/university

A fully managed, isolated AI environment for the full AI lifecycle

AGENDA

1. **Full Platform Overview**
What the platform is, and what managed and isolated mean
2. **Predictive AI and GenAI**
Three pillars, and what you can build on each
3. **Set Up Your Account**
Five steps from invitation email to first login
4. **The Full Interface Tour**
The homepage in three zones, and the left sidebar
5. **Admin Guide**
Access, resources, workspaces, and governance
6. **Support and Next Steps**
Where to get help, and where to go next

PART ONE

The Platform

What H2O.ai Managed Cloud is, and the problem it solves

One environment, data to production

Most teams are not limited by ideas. They are limited by fragmentation.

THE PROBLEM

Three separate systems

Data lives in one system, models are built in another, and deployment happens somewhere else.

THE COST

Delays and blind spots

Fragmented tooling causes delays, duplicated effort, and gaps in governance.

THE ANSWER

One connected place

Data processing, model development, and deployment all run in a single managed environment.

Two principles: managed and isolated

PRINCIPLE 01

Managed

- Infrastructure handled for you
- Training, scaling, and deployment on preconfigured environments
- GPU support when the workload needs it
- Your team builds instead of maintaining

PRINCIPLE 02

Isolated

- Each customer gets a dedicated environment
- Data, compute, and workloads are never shared
- Supports enterprise security, privacy, and governance

PART TWO

What You Can Build

Three pillars, two kinds of AI, one route to production

Three core pillars

PILLAR 01

Modeling and automation

Automated machine learning, feature engineering, experiment tracking, and model comparison.

PILLAR 02

AI apps and data engineering

Interactive applications, reusable pipelines, and intelligent workflows in a shared environment.

PILLAR 03

Deployment and governance

Deploy, monitor, version, detect drift, and keep models explainable in production.

Two kinds of AI, one platform

Both run in the same environment, under the same governance model.

WHAT IS LIKELY TO HAPPEN?

Predictive AI

- Fraud detection
- Demand forecasting and credit risk
- Churn prediction and anomaly detection
- Structured data: transactions, time series

HOW CAN WE GENERATE AND REASON?

Generative AI

- Enterprise assistants
- Document intelligence and summarization
- Retrieval-augmented generation, agentic workflows
- Unstructured data: text, images, audio

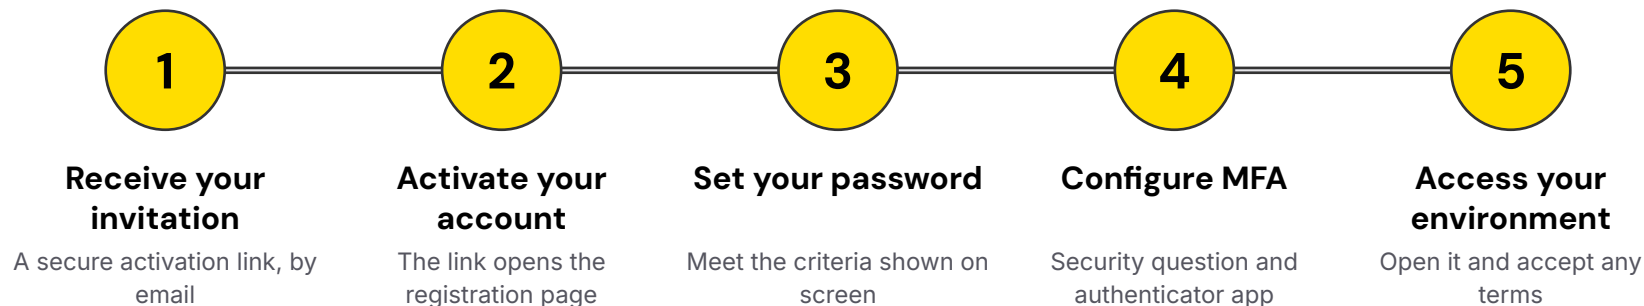

PART THREE

Getting Access

Five steps from the invitation email to a working login

Five steps to your first login

Access runs through an External Okta account, the identity platform for H2O.ai environments and the support portal.

Activation links expire after a limited time. Contact your administrator or support@h2o.ai for a new one.

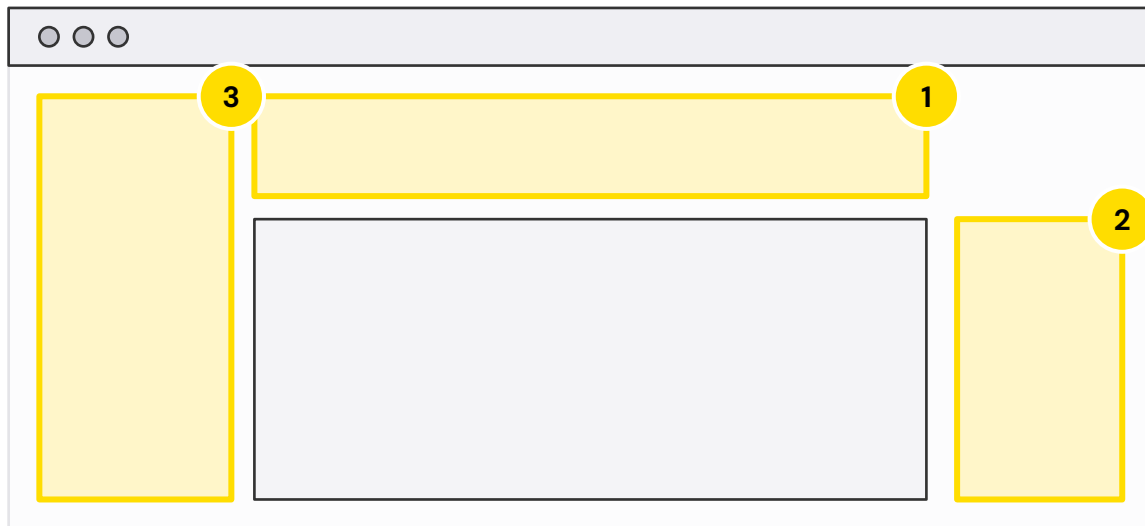

PART FOUR

Inside the Platform

The interface, the sidebar, and the administrator view

The homepage in three zones

- 1 Top and centre**
Workspace selector, top bar, Start
Here tiles, running resources
- 2 Right panel**
Core applications, one click away
- 3 Left sidebar**
Your primary navigation, in four parts

The left sidebar, four parts

Navigation

Home and the App Store, your catalogue of pre-built and custom AI applications, organised by category.

The 'My' section

AI Engines for compute, Apps and App Instances, Secrets for API keys, Audit Trail for compliance, and Workspaces.

Operations

Where trained models are deployed, monitored, and managed in production through H2O MLOps.

AI for Documents

Enterprise h2oGPTe for interacting with your data, and H2O Document AI for processing complex files.

The administrator view

As an admin you do not just use the platform, you govern it.

AS A USER

You build

- Your own engines, apps, and instances
- Your own workspace and experiments
- Focused on models and applications

AS AN ADMINISTRATOR

You govern

- Every engine, app, and instance, all users
- Users, groups, OAuth clients, and workspaces
- AI Unit reporting, analytics, resource blocking

KEEP GOING

Welcome to H2O.ai. Happy building.

Explore the platform, launch your first application, build your first model, and start turning data into real business impact.

In-platform support
